Bill Gates

Bill Gates was born on October 28, 1955, in Seattle, Washington. Since he was a kid, he showed a big interest in computers and programming. At the age of 13, he was already writing code, which led him to discover his passion for technology. Later, he enrolled at Harvard University, where he met Paul Allen, who would become his partner. Together, they founded Microsoft in 1975 with the idea of bringing computers into every home and making them more accessible to people.

Their big opportunity came in 1980 when they signed a contract with IBM to create an operating system: MS-DOS. This project was a total success and marked the beginning of Microsoft's rapid growth. In 1985, Gates launched Windows, a system that completely changed the way people used computers thanks to its graphic interface that made everything easier.

Throughout the 1990s and 2000s, Gates kept innovating and expanding Microsoft's products, like Word, Excel, and PowerPoint, which are now essential tools for school and work. In 2000, he decided to step down as CEO to focus on the Bill and Melinda Gates Foundation, dedicating himself to improving health and education around the world.

I admire Bill Gates because he changed the history of technology and made computers part of everyone's daily life. He also inspires me because, after reaching success, he decided to use his money and knowledge to help solve global problems, proving that technology can have a positive impact on society.
