Armenia, Quindío, 2026

My name is Sara Maria, and I am 19 years old. Currently, I am studying Systems and Computer Engineering at the University of Quindío, and at the same time, I am part of the ADSO program at SENA. I consider myself an organized and committed person who always tries to learn new things and improve every day.

Although I am a little shy, I enjoy working with other people and sharing ideas in academic projects. During my studies, I have participated in programming activities and collaborative assignments that helped me improve my teamwork, communication, and time management skills. One important academic experience for me was developing small software projects with my classmates, where I learned how to solve problems and work under pressure.

I am applying for opportunities related to software analysis and development because I am passionate about technology and programming. I believe I am a good fit for this field because I am dedicated, creative, and willing to continue learning. In addition, I have acquired technical skills in programming languages such as Java and Python, and currently, I am learning Elixir. I also have skills in the use of technological and computer tools that are useful for software development.

My future goals are to graduate successfully, gain professional experience, and get a stable job in the technology field. I would also like to continue improving my programming skills and become a better professional and person.

In conclusion, I consider myself someone with motivation, discipline, and the desire to grow professionally. Even though I still have many things to learn, I am ready to continue working hard to achieve my goals and contribute positively to any academic or work environment.
